Search photo google chrome

Google has been experimenting with the best uses of Lens for some time. At first, it was mobile-only. Then it was added to Chrome in a low-key way, and some users recently caught a fully search-integrated test version in a desktop browser while using Incognito Mode. Now it looks like there's been another distinct change, as GHacks notes that Lens is now the only reverse image search choice when you right-click on a photo while using Chrome. If you're using an updated version of Chrome, you should be able to simply right-click on photos, and you'll see a menu that says "use Google Lens." That's all. Yes, reverse image search as we've come to know it still exists, but instead of a couple of clicks, it's now a bit more of a journey to get there. Users can also still get extensions that make reverse image searches via the original feature easy, of course, but if you like Lens, congrats! It's now your main Chrome desktop option when tracking down whatever you're looking for. The search monolith hasn't addressed the change, but it's reasonable to believe Google is doubling down on the gospel of Google Lens with another push for people to utilize that rather than the legacy version. And the Lens option could offer better context for what you're searching for. In the end, we'll just have to wait and see if users ultimately approve of the shift. News search with google lens google lens image search Steve Huff (135 Articles Published) More From Steve Huff English (United Kingdom)English (United States)Español (Latinoamérica) Have a question? Use Google and you'll find the answer to just about anything. The trick is to be efficient in your search and selective about your sources. Keep this list of 12 effective Google search tips handy so that you can have better and more relevant results.Searching Exact PhrasesRandom search terms lead to random results. Here are tips to create concise search terms: Quotes: Find information on an exact phrase or term by putting quotation marks around your phrase in the search box. Multiple words: Focus your search with multiple terms or words. You can type in the word "or" to do this. For example, search the phrases "Best ways to write a resume OR How to write a resume" in order to concisely cover all bases. Titles: Find sites you need with qualifiers (remember the colon). For example, type "electric cars intitle: new models." Or, search URLs by swapping out "intitle:" for "inurl:" or "allinurl:" for helpful sites. Search for websites with answers in the text with these qualifiers: "intext:" or "allintext:." You'll get succinct results. Searching by Eliminating WordsFor a concise search, type in a term, phrase or question with words that you don't want the search engine to find. Use a minus symbol or a hyphen to sharpen searches. For example, for information about Jaguars, but not the car or football, type in "Jaguars -cars." Or, do a triple elimination by typing in "Jaguars -cars -sports -football."Searching ImagesThere are two tips to keep on hand for Google image searches: Find an image: Use the same search parameters for text and images. Click on the "Images" tab right below the search bar for images relating to your search, or type into the browser bar "🔍" to search from there. Find information about an image: Google recognizes uploaded images and offers sites with related information. Click the camera icon on the Google search bar for prompts, or drag and drop images into the search bar. General Searching TipsIf you're happy with using a basic Google search, there are a couple of tricks to keep your results tight: Adding search words: Plug in a simple phrase in the search bar and add as you go. As an example, start with "resumes," then add "examples of resumes," and on the third try, type in "examples of chronological resumes." Use critical words: Google matches your query with keywords online. Use important words and words that are used in websites for refined results. Google Search CommandsThere are little-known Google search commands. Here's a list of four commands to keep within reach: PDFs: Search for PDFs by typing your search term plus "filetype:pdf." For example, if you're looking for information about how to coupon, simply type in "coupons filetype:pdf" and you'll find relevant PDFs. Weather: There's no need for an app, simply type "weather" plus your zip code. Definitions: For a quick lookup, type "define" plus the word you want to look up. Time: To find out the time anywhere in the world, type "time" followed by wherever you want to know the exact time. Commands reduce your search into one click. MORE FROM QUESTIONSANSWERED.NET Photo Courtesy: @googlephotos/Twitter The Albums feature in Google Photos is easy to set up and shouldn't take any longer than a few minutes to complete. This free cloud storage service is perfect for media files, such as photos, images, video clips and audio files, and is available to Google subscribers. The Google Photos service has a feature that automatically sorts the image files uploaded by subscribers, but the Albums feature expands on this and allows them to organize their photos according to much more specific preferences. Albums also makes it easier and more efficient for Google Photos users to share sets of photos with family and friends. Let's take a look at how it works.Choose a Google Photos Plan Based on File QualityGoogle Photos service became available to everyone with a Google account in 2015. This free cloud storage service offers free unlimited storage where subscribers can save an unlimited number of images with a high-quality image maximum of 16 megapixels. Video clips that subscribers are allowed to upload have a resolution cap of 1080p. Photo Courtesy: StockSnap/Pixabay Because some smartphone models give users the option of taking RAW images, the file size and resolution of many smartphone photos are larger than 16MP. Fortunately, subscribers can also choose another Google Photos option that gives them 15 gigabytes of free storage space where they can save these original, unaltered images. Google Photos subscribers who take these types of photos can choose to pay a small fee for access to an extra 100GB of space if they need it.Set Up Google PhotosTo use Google Photos cloud storage service, you have to download and install the app on your Android or iOS device. Additionally, Windows and Mac computer users can access the web-based version of Google Photos. When running the app for the first time, be sure to set the image quality for your uploads by choosing either High Quality or Original. Note that a 16MP resolution for photos is usually perfectly suitable for most purposes unless your work or hobby requires higher resolution images. Photo Courtesy: @googlephotos/Twitter After signing into your Google account, run the Google Photos app. Tap on "Menu" at the top and then select "Back up & sync." If you chose to save images in their original resolution, you may run out of storage space if you chose the 15GB storage option, or some photos may fail to upload if you chose the unlimited storage option with maximum quality limits. Check to make sure all your photos were properly backed up after the process completes.Set Up Your Google Photo AlbumsAfter backing up and syncing the images on your mobile device or uploading your photos from your PC to Google Photos, it's easy to take the next step and create photo albums. To set up an album when using a mobile device, sign in to your Google Account and run Google Photos. Tap on the "Albums" icon on the bottom of the screen. Enter a name for your new album and then tap "Add Photos." Select the pictures you want to add to the album. You can then choose to share the album or simply exit the app after you're done adding photos. Photo Courtesy: PublicDomainPictures/Pixabay If you're using a PC or Mac, go to the Google Photos website to set up an album for your photos. Sign in to your Google Account and then navigate to Google Photos in your Google Drive. Click on all the photos that you want to organize into a single album, and then click on the "Albums" icon on the left-hand side and select Create New Album. Name your new album and then add photos to the album by dragging them into the box. You can also upload photos straight from your PC or Mac into the new album.Take Advantage of Google Photo Smart FeaturesOrganizing your albums can get a bit tedious if you have just one big file of photos. Thankfully, Google Photos has very helpful functionalities that make organizing everything much easier. For instance, if you create a new album, selecting just a few pictures of an individual, such as your child, and then tapping on "Confirm" will automatically fill the album for you with all the other photos of your child that you have already uploaded.Photo Courtesy: Robert Nyman/Flickr Sort Photos into CategoriesGoogle Photos can also help you sort photos according to different categories, such as the date the photos were taken, the people in them or the places in them. Assigning a name to an individual who appears in photos or a phrase to describe a place or event helps the technology organize similar photos automatically under the same name or phrase. This makes it easier for you to locate photos by simply searching your albums using the name or phrase as a search keyword. Photo Courtesy: Brooke Cagle/Unsplash Other Google Photos features are helpful as well. It's a good idea to take some time to fully explore the different features to familiarize yourself with the app's functionalities so you can make the most of this free Google service.
